VORWORT

- Die Kommunikation zwischen Webbrowser am PC und Server Komponente am Raspi Zero kann nur TLS-verschlüsselt erfolgen, weil modernen Browser dies erzwingen. Dies ist kein unnötiger Luxus, sondern wird vom Webbrowser (Chrome, Safari, ..) für Websockets gefordert
- Offizielle Zertifikate von Let's Crypt werden nur für offizielle Domains ausgestellt. Wenn man mit mDNS „.local“ (auf MacOS oder Windows mit iTunes installiert) oder Fritz!Box .fritz.box arbeitet, dann gibt es keine SSL-Zertifikate, die gegen ein getrustetes Root-Zertifikat laufen, die im Browser und Betriebssystem vorinstalliert sind
- Jedoch ist die für den geübten Admin kein Problem, denn Caddy bringt eine PKI mit Zertifikatsrotation mit sich. x.509 Zertifikate sind trotzdem komplex
- Daher muss das self-signed Root Zertifikat der Caddy PKI importiert werden

- SSL-Zertifikate enthalten immer den Hostname, der mit der URL übereinstimmen muss. Es ist nicht möglich mit IP-Adressen zwischen Webbrowser und Raspi im lokalen Netz zu arbeiten. Es muss alles zwingend über DNS-Namen laufen, die auch dem cn= Eintrag im Zertifikat entsprechen
- Die Serverkomponente ist ein Python Script, das die Messages per UDP mit dem MeshCom Node austauscht und alles über einen WebSocket weiterleitet. Der WebSocket wird TLS verschlüsselt durch Caddy, den Reverse Proxy
- Der lighttpd Webserver wird ebenso durch Caddy TLS verschlüsselt. Die Webseite selbst ist statisch, es wird kein PHP benötigt, es ist eine Single Page App
- Zum Abschluss nicht vergessen auf dem MeshCom Knoten `--extudp on` zu konfigurieren und einzuschalten.
- Stabilere Kommunikation mit viel mehr Daten läuft über Bluetooth

INSTALL PROCEDURE

- Flash SD card, insert, boot up, wait for FS expansion (takes 2 minutes)
- Login via ssh and your user, execute statements one after another

```
■ curl -fsSL https://raw.githubusercontent.com/DK5EN/McAdvChat/main/install_caddy.sh | bash  
■ curl -fsSL https://raw.githubusercontent.com/DK5EN/McAdvChat/main/mc-install.sh | sudo bash  
■ curl -fsSL https://raw.githubusercontent.com/DK5EN/McAdvChat/main/install_mcproxy.sh | bash  
■ sudo vi /etc/mcadvchat/config.json  
■ curl -fsSL https://raw.githubusercontent.com/DK5EN/McAdvChat/main/install_mcproxy.sh | bash
```

- Got to web browser,
 - On a Mac Computer with mDNS responder: import root certificate <https://mcapp.local/root.crt>
 - On a Windows PC, but with a Fritz!Box as DSL Router: <https://mcapp.fritz.box/root.crt>
- Go to web browser,
 - On a Mac: <https://mcapp.local/webapp>
 - On a PC with Fritz!Box: <https://mcapp.fritz.box/root.crt>
- Click connect MC
- Enjoy

TROUBLE SHOOTING GUIDE

- After you have setup everything, make sure that you can open the McApp WebPage
- If the Websocket connection then fails, this means: Caddy + LightHTTPd is running, but something with the mcproxy service isn't right.

Check that all services are up and running

```
martinwerner@MacBook-Pro-von-Martin ~ % ssh mcapp.local
martin@McApp:~ $ systemctl status caddy
● caddy.service - Caddy
  Loaded: loaded (/lib/systemd/system/caddy.service; enabled; preset: enable
  Active: active (running) since Fri 2025-06-13 20:55:23 CEST; 1 week 3 days
    Docs: https://caddyserver.com/docs/
  Main PID: 504 (caddy)
    Tasks: 11 (limit: 178)
      CPU: 5min 3.308s
  CGroup: /system.slice/caddy.service
      └─504 /usr/bin/caddy run --environ --config /etc/caddy/Caddyfile

martin@McApp:~ $ systemctl status lighttpd
● lighttpd.service - Lighttpd Daemon
  Loaded: loaded (/lib/systemd/system/lighttpd.service; enabled; preset: ena
  Active: active (running) since Thu 2025-06-19 10:26:25 CEST; 4 days ago
  Process: 15531 ExecStartPre=/usr/sbin/lighttpd -tt -f /etc/lighttpd/lighttp
  Main PID: 15536 (lighttpd)
    Tasks: 1 (limit: 178)
      CPU: 20.959s
  CGroup: /system.slice/lighttpd.service
      └─15536 /usr/sbin/lighttpd -D -f /etc/lighttpd/lighttpd.conf

martin@McApp:~ $ systemctl status mcproxy
● mcproxy.service - McAdvances MeshCom Proxy Service
  Loaded: loaded (/etc/systemd/system/mcproxy.service; enabled; preset: enab
  Active: active (running) since Thu 2025-06-19 11:27:08 CEST; 4 days ago
  Main PID: 16118 (python3)
    Tasks: 5 (limit: 178)
      CPU: 5min 55.250s
```

- Check your config file

```
martin@McApp:~ $ cat /etc/mcadvchat/config.json
```

```
{
  "UDP_PORT_list": 1799,
  "UDP_PORT_send": 1799,
  "UDP_TARGET": "192.168.68.69",
  "WS_HOST": "127.0.0.1",
  "WS_PORT": 2980,
  "PRUNE_HOURS": 168,
  "MAX_STORAGE_SIZE_MB": 50,
  "STORE_FILE_NAME": "/home/martin/mcdump.json",
  "VERSION": "v0.0.0",
  "CALL_SIGN": "DK5EN-99",
  "LAT": 48.4031,
  "LONG": 11.7497,
  "STAT_NAME": "Freising",
  "USER_INFO_TEXT": "DK5EN-99 Node | Location: Freising, Germany | Operator: Martin | QRV: 70cm/2m/HF | QRZ.COM DK5EN"
}
```

No comments in json files, make sure to have a comma at the end!

Don't change UDP_PORT*, WS_HOST, WS_PORT.

CALL_SIGN is used for the command interface. If you don't like commands, don't fill it.

STAT_NAME and USER_INFO_TEXT is used for „!WX“ command

SSH ERRORS – REMOVE THE OLD KEY

```
martinwerner@MacBook-Pro-von-Martin ~ % ssh mcapp1.local  
@@@@@@@  
@     WARNING: REMOTE HOST IDENTIFICATION HAS CHANGED!  @  
@  
IT IS POSSIBLE THAT SOMEONE IS DOING SOMETHING NASTY!
```

Someone could be eavesdropping on you right now (man-in-the-middle attack)!

It is also possible that a host key has just been changed.

The fingerprint for the ED25519 key sent by the remote host is

SHA256:MX/SDhlYcRGgQ9TspnGN87VZw7UHeibLF7kUK60ymck.

Please contact your system administrator.

Add correct host key in /Users/martinwerner/.ssh/known_hosts to get rid of this message.

Offending ECDSA key in /Users/martinwerner/.ssh/known_hosts:18

Host key for mcapp1.local has changed and you have requested strict checking.

Host key verification failed.

```
ssh-keygen -R mcapp1.local
```

UPDATING TO THE LATEST VERSION

- At a later time, update everything, just use the script
- mc-install.sh is to keep all installed files up to date
- install_mcproxy.sh does maintain config files

```
martin@McApp:~ $ curl -fsSL https://raw.githubusercontent.com/DK5EN/McAdvChat/main/mc-install.sh | sudo bash

[INFO] Skript läuft unter Benutzer: martin
[INFO] Lokale WebApp-Version: v0.1.0
[INFO] Lokale Python-Skript-Version: v0.2.0
[INFO] Lokale Shell-Skript-Version: v0.2.0
[INFO] Install-Skript-Version: v0.1.0
[INFO] Remote WebApp-Version: v0.1.0
[INFO] Remote Python-Skript-Version: v0.2.0
[INFO] Remote Shell-Skript-Version: v0.2.0
[INFO] Reloade Webserver ...
[INFO] Prüfe WebApp unter https://rpizero.local/webapp/version.txt
[INFO] WebApp erfolgreich aktualisiert auf Version v0.1.0
[INFO] Installations-Skript erfolgreich abgeschlossen.

martin@McApp:~ $ curl -fsSL https://raw.githubusercontent.com/DK5EN/McAdvChat/main/install_mcproxy.sh | bash
```

MCAPP COMMANDS

- If you configure your Callsign with SID in the config file, you can send commands to the server process
- !help
- !stats
- !stats 96
- !search db0ed
- !search dl2ja-1
- !mheard or !mh
- !mheard type:pos
- !mheard tye:msg
- !pos db0ed
- !wx

HIGH LEVEL ARCHITECTURE

- High level overview of how everything is tied together

Some screenshots on how to install

SD CARD & RPI ZERO

- Insert your at least 32GB SD Card into your card reader
- Please only use SD Cards with 100MBit/s like SanDisk
- Have your Raspberry Pi Zero 2W at Hand

CUSTOM OS INSTALLATION

We want to install a headless, 64Bit Debian Bookwork

- I do recommend Raspberry PI Imager, which can be found here
<https://www.raspberrypi.org/downloads/>
- Select your Model: Raspberry Pi Zero 2 W
- For OS, select “other“ – „Raspberry Pi OS Lite (64-bit), with no desktop, approx. 0,4GB
- Select your SD Card

.. And click next

IMPORTANT CUSTOMIZATIONS

- Choose your hostname: McApp in our example
- Choose what ever username, you want. I do not recommend to setup a standard „pi“ user, as this is a security risk
- Choose your login password, which should later be changed to a pre-shared ssh key
- Make sure you have your WiFi Settings correct, because otherwise you will not be able to access your headless system

ACTIVATE SSH

- Make sure that ssh is activated.
- For the initial setup, we start with password Authentication.
- If you are experienced, you can also set a pre-shared key.

OPTIONS

- Nothing to change here, everything standard.
- Now click save
- Then click yes to apply custom settings
- Now agree to erase everything on the SD card.

FLASHING THE SD CARD

- Now wait for the flashing to be finished
- On MacOS you get asked about your Admin password, as this is a low level write, that needs more privileges

- After a short while you should see the success message
- Close Raspberry Pi Imager, eject your SD card

FIRST TIME BOOT UP

- Insert your SD card into Raspberry Pi 2 Zero
- Attach 5V via Mini USB Jack
- The greenlight starts flashing

Raspberry Pi is booting up and expanding the filesystem. Depending on your SD card, this takes at least 2 Minutes. Grab yourself a coffee and wait

- If you have mDNS, then you can try to ping your Raspberry Pi
- Otherwise check your WiFi Router for the IP of the new device

```
[martinwerner@MacBook-Pro-von-Martin .ssh % ping mcapp.local
ping: cannot resolve mcapp.local: Unknown host
[martinwerner@MacBook-Pro-von-Martin .ssh % ping mcapp.local
PING mcapp.local (192.168.68.70): 56 data bytes
64 bytes from 192.168.68.70: icmp_seq=0 ttl=64 time=121.193 ms
64 bytes from 192.168.68.70: icmp_seq=1 ttl=64 time=11.150 ms
64 bytes from 192.168.68.70: icmp_seq=2 ttl=64 time=8.156 ms
64 bytes from 192.168.68.70: icmp_seq=3 ttl=64 time=3.976 ms
64 bytes from 192.168.68.70: icmp_seq=4 ttl=64 time=8.038 ms
64 bytes from 192.168.68.70: icmp_seq=5 ttl=64 time=15.590 ms
```

TIME TO ACCESS YOUR RASPI

Use putty on Windows or term on MacOS

- Make sure to use the correct username for your Pi Zero
- Accept the new ssh fingerprint
- Enter your password
- You should now have ssh access to your Raspi

- Now run the 4 commands shown on Page 4- “New install procedure”

```
martinwerner@MacBook-Pro-von-Martin ~ % ssh martin@mcapp.local
The authenticity of host 'mcapp.local (fd04:1f3d:4fc0:f442:33a7:6757:6247:c795)' can't be established.
ED25519 key fingerprint is SHA256:nnUqWm3kf37xvDEiBbNPShRfiu9j4pyRjr5SwQ6LNmY.
This key is not known by any other names.
Are you sure you want to continue connecting (yes/no/[fingerprint])? yes
Warning: Permanently added 'mcapp.local' (ED25519) to the list of known hosts.
martin@mcapp.local's password:

martin@McApp:~ $
```

CERTIFICATE HANDLING

CHECK THE WEB SERVER DOWNLOAD SSL CERTIFICATE

- First we access our lighttpd via http – the unencrypted version.

<http://mcapp.local>

- You should see the placeholder page

- Now we download the self-signed root certificate

<http://mcapp.local/root.crt>

- Make sure to accept the blocked download

INSTALL THE SSL CERTIFICATE

- Locate your root.crt in your download folder
- Double click root.crt
- Enter your Admin password
- Now locate the newly installed certificate
- Trust the certificate for TLS encryption

- Same is true for the iPhone. After import, you have to accept it in General – Profiles AND then you need to trust it, which is hidden in the settings menu

TESTING SSL ACCESS

- Go to your web browser, now we access https

<https://mcapp.local>

SSL HANDLING IN SAFARI

- If you haven't imported the certificate yet, you get a certificate error!

DOWNLOAD THE ROOT CERTIFICATE

- Enter the URL
- Click on “diese Webseite besuchen”

YES, YOU WANT TO OPEN THE PAGE ..

- Click on “Webseite öffnen”

YES, YOU WANT TO DOWNLOAD THE CERTIFICATE

- Click on “erlauben”

NOW THE ROOT.CRT IS IN YOUR FILE SYSTEM

- Double click on root.crt

AFTER THE DOUBLECLICK, KEY MANAGEMENT OPENS

- Grant Access ..

Schlüsselbundverwaltung

Die Schlüsselbundverwaltung versucht, auf Informationen zuzugreifen, die in deinen Schlüsselbünden gesichert sind.

Verwende Touch ID oder gib dein Passwort ein, um dies zu erlauben.

Passwort verwenden ...

Abbrechen

- And find the root Certificate with the red X

The screenshot shows the 'Schlüsselbundverwaltung' (Keychain Management) window. In the center, there is a list of certificates. One certificate, 'Caddy Local Authority - 2025 ECC Root', is highlighted with a red X icon next to its name, which is typically used to indicate a root certificate that is not trusted. The window also includes a search bar at the top right and various navigation tabs like 'Zertifikate'.

Name	Art	Verfällt	Schlüsselbund
Caddy Local Authority - 2025 ECC Root	Zertifikat	15.02.2035, 09:08:48	System
Caddy Local Authority - 2025 ECC Root	Zertifikat	01.03.2035, 20:55:40	System
Caddy Local Authority - 2025 ECC Root	Zertifikat	05.05.2035, 07:38:36	System
com.apple.kerberos.kdc	Zertifikat	28.10.2044, 09:33:09	System
com.apple.systemdefault	Zertifikat	28.10.2044, 09:33:09	System

OPEN ROOT CERTIFICATE AND TRUST FOR SSL THEN CLICK RED X TO CLOSE

IF EVERYTHING WAS RIGHT, THEN YOU SEE ..

Mac OS X Keychain Access window showing the 'Certificates' tab.

Schlüsselbundverwaltung

NOW EVERYTHING SHOULD BE WORKING FINE

The screenshot shows a web application interface with a dark header bar. The header includes a back button, a refresh button, a search bar with the URL "mcapp1.local/webapp/messages/all", and several status indicators: "Internet" (red X), "BLE" (red X), "MeshCom" (green checkmark), a version number "v0.97.0", and links for "Command Help", "BLE", and "Settings".

The main content area has tabs for "Messages", "Positions", "mHeard", and "Internet". The "Messages" tab is active, showing a list of three messages from "HB3XTK-1".

Messages:

CHECKS AND CONFIGURATION

Advanced Troubleshooting

OPEN WEBBROWSER

- Click option command J for Debug Output
- Go to url: <https://mcapp.local/webapp/>
- Click on Settings
- Enter your Callsign
- Your SID
- 20 for scroll back buffer
- mcapp.local for your UDP Proxy server
- 2981 for the secure socket of the UDP Proxy that runs in python
- Click Connect MeshCom

Callsign	DK5EN	SID	99

TIME TO TEST EVERYTHING

- Go to <https://meshcom.oevsv.at/#>
- Click on Test
- Now enter a test Message
- Check on MeshCom Test page

The screenshot shows a web application window titled "WebApp" with the URL <https://mcapp.local/webapp/messages/all>. The interface includes tabs for "Messages", "Positions", "Internet", "MeshCom" (which is selected), and "Bluetooth". A "Settings" button is also present. The main area displays a list of messages from various users:

- 0.0 mm Wind: 17 Km/h Pressure MSL: 1003.9 hPa
- DK9MS-12 www DK9MS-12
- Guten Mittag aus Fulda, Osthessen, 9 Grad, bedeckt, es hat geregnet, 73 Markus
- DA70E2F8 20 17.04.2025, 12:28:19
- OE5HWN-6 www BOT GATE
- Mittagspause in der Kalten Kuchl
- 8C59DCA4 * 17.04.2025, 12:30:22
- D05DHA-12 www D05DHA-12
- guten Hunger Helmut
- 3DCDBFAA * 17.04.2025, 12:30:55
- DK8GO-12 www DK8GO-12
- hier liegt schnee
- 75D311E4 * 17.04.2025, 12:32:10
- D0B0SEP-12 www D0B0SEP-12
- D0B0SEP BBS online <https://qrz.com/db/db0sep>
- A2659230 * 17.04.2025, 13:00:01
- Neueste unten 20

Below the list, there is a message input field with placeholder text "Gesendet: Eine kleine Testnachricht, ob was raus geht". To the right of the input field are buttons for "TEST" and "cFDump". A status bar at the bottom indicates "all DK5EN-99 | WsProxy:mcapp.local:2981 | remaining:124". On the far right, a sidebar shows several error messages related to WebSocket connections.

The screenshot shows a web browser window with the URL meshcom.oevsv.at/#. The page displays a log of messages in a table format:

	Date	From	To	Type	Value	Count	Count	Count	Message	Actions
34	2025-04-17 12:22:45	A2659224	DB0SEP-12	DB0SEP-12	DK9MS-12	4	0	0	Ping received, BBS online	EU8 SF11CR46BW250

The message from row 44 is highlighted with a red border. At the bottom of the page, there is a footer with the text "Starttime: 2025-04-15 20:50:37" and "ID: 338658".

UPDATE LOCALES AND KEEP SYSTEM UPDATE

```
martin@McApp:~ $ sudo raspi-config
```

- 5 Localization -> L1 locale -> select de.UTF-8 -> OK -> C.UTF-8 -> OK
- Finish

```
martin@McApp:~ $ sudo apt-get update
```

```
martin@McApp:~ $ sudo apt-get dist-upgrade
```

```
martin@McApp:~ $ sudo reboot
```
